## Eye contour gel mask EYE CONTOUR RESCUE

Reduce puffiness, decongest the eyelids, get rid of bags, smooth out wrinkles and hydrate tissues...

An innovative formula treating the specific problems related to the eye contour area.

An expert active ingredient, the Eye contour lift, associated with cornflower distillate, hydrolite 5 and a HORMETA trace elements complex.

Eye contour lift

### Reduce puffiness...

In order to correct the physiological deficiencies causing puffiness below the eyes, the expert active ingredient, HORMETA Eye contour lift, combines appropriate specific components: a combination of 3 active molecules with additive effects.

-The hesperidin methylchalcone (flavonoids) reduces water leakage by reinforcing capillary walls.

-The VW dipeptide mobilizes the water in tissues and drains it activating the lymph node circulation.

-The lipopeptide PAL-GQPR reduces inflammation and improves skin firmness and elasticity.

Day after day, the puffiness under the eyes decreases, the eyelids are decongested, the bags start disappearing.

Cornflower distillate

### Make eyes less tired looking...

Cornflower distillate, through its decongestive, soothing, and vasoconstrictive properties, provides complete comfort from application.

Eyelids become unswollen, the eye contour is less tired looking, the eyes radiant.

Hydrolite-5

### Hydrate and energize...

Hydrolite-5 and trace elements successfully restore an optimal water and mineral balance\*.

-Hydrolite-5 ensures the intensive hydration\* of the eye contour area, where the loss of water is twice as significant than on the rest of the face.

-The HORMETA trace elements complex, in its ionic form, provides essential minerals to proper skin function. Copper, Manganese, Magnesium, Zinc, Iron compensate nutritional deficiencies.

HORMETA trace elements complex

Puffiness is reduced, the eye contour is smoothed, decongested.  
The eyes look younger...

Active bases

Hydrolite-5 5%, Eye contour lift 3%, Cornflower distillate 3%, Trace elements solution 0.4%: Copper, Manganese, Magnesium, Zinc, Iron, Silicon.

## Appreciate...

### Pleasure & care

-Its gel texture, deliciously glowing upon application.

-Its fresh, delicate feeling with the harmony of fruit (mandarin, black currant) and flower (jasmine, orchid) notes.

-Its very safe formula, with no preservatives, easy on eye contour sensitivity and guaranteeing optimal tolerance, even for the most sensitive eyes.

### Beauty tips

A unique texture, an original use...

Two special uses, depending on the extent of the problem...

-An effective eye mask...

Apply on the eye contour in a thick layer, leave on 10 minutes, then remove the excess with a cotton pad.

-An effective eye gel...

Apply a thin layer of gel in a circular movement and smooth out under the eyes. It can be left on for immediate penetration. No need to remove.

In this single beauty product, you will get the incomparable nutritive effect of a mask and the rapid penetration of a gel.

"Customized" care par excellence...

### Complementary products

-Eye contour gel with time released anti age encapsulates.

# Visible results, scientifically proven...

## A clinical study involving Eye contour lift

### Study objective

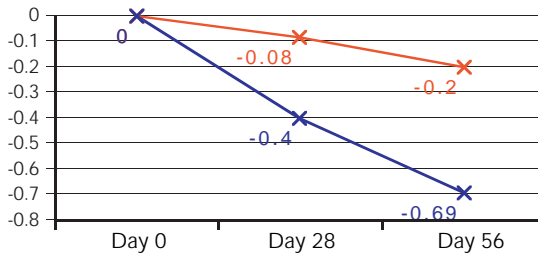

The eye contour lift study was based on the premise that a truly efficacious care product on lower eyelid puffiness must be able to treat individuals with long term puffy eyes over time, and this, with improved, long-lasting efficacy.

### Study protocol

20 female volunteers, aged 40 to 60 with long term puffiness below the eyes. Twice daily application, for 56 days, of a gel containing 3% Eye contour lift. Morphometric measurements performed at the beginning of treatment, after 28 days and 56 days.

### Significant results

DECREASE IN THE OBSERVED PUFFINESS VOLUME

- Mean decrease in the observed puffiness volume (in mm)
- Mean decrease in the observed puffiness volume (in mm)

### Conclusion

The study demonstrated true, highly significant efficacy for the Eye contour lift active ingredient on the reduction in puffiness. During a longer term treatment, researchers expect to gain greater efficacy.
